

Data Warehousing

CS-452

Spring 2023

Activity 8

Question:

Read from two flat files and two tables from any SQL database (e.g MySQL, Oracle etc). You need to read 5th source which is a table stored in MS SQL Server database. Once configure all five sources, then load data to MS SQL Server (Data Warehouse). Now schedule the ETL process to occur every week using SQL Server Agent.

Note:

Make sure to install MS SQL Server (Developer Edition).

Prepare a word document to upload using snapshot and written explanation.

MS Word file name should be as follows (Don't change the format).

19B-001-SE_Your_Name_Activity08_Group#

If you use any website, book, or research paper provide the link(s).

Make sure to upload prepared activity Word Document, script, package and dataset files or any other supporting files.
